

European College of Animal Reproduction

- ECAR –

Resident summer school guidelines

Summerschool aim: to teach and expose ECAR residents to the comparative aspect of reproductive physiology

Delivery methods:

Lectures

Discussion

Practicals

Mock exam

Resident research presentations

As ECAR residents all undertake their respective residencies in one subspeciality, they tend not to be as intensively exposed to all other species. As there are huge interspecies differences when it comes to most aspects of reproductive physiology and clinical approaches, the summerschool is the ideal forum for the residents to get exposed to this.

Species covered: Ruminant, Porcine, Equine, Small animal and biotech were possible, exotics also

Format: short (10-15) presentations from experts on chosen topics in the area of reproduction (mastitis, dystocia, AI etc). After each topic a forum discussion

1 session as a Mock exam via Moodle (Need EC knowledge for this)

Practicals where possible

Resident research presentations

Optimum length: 2 days and associated with conference.
